

KECK MEDICINE OF USC – LAS VEGAS

Advanced Transplant Care In Southern Nevada

Opened in April 2024, **Keck Medicine of USC – Las Vegas** makes it easy for patients living in Southern Nevada to get expert specialty medical care locally — reducing the need for travel.

Specializing in treatment for complex conditions, our team of world-renowned physicians from the USC Transplant Institute provides the advanced care patients need. Working with insurers and referring physicians, we develop a personalized, comprehensive treatment plan to help patients achieve positive outcomes.

With world-class medical care located near where patients live and work, they can spend less time seeking treatment — and more time enjoying life.

COORDINATED, PERSONALIZED CARE THAT BENEFITS PATIENTS

The collaboration we practice within our walls extends to our relationships with referring physicians, case managers and other health-care partners. Because many of our referred patients have complex medical issues, we aim to make the referral and transferring process as easy as possible.

At Keck Medicine of USC – Las Vegas, we will offer medical care, including intake and follow up, in support of:

- Heart Transplant
- Liver Transplant
- Lung Transplant
